

Version 2022.2.2

Updated: 4/26/2022

RELEASE NOTES:

Summary

DF Studio is pleased to announce its latest software release, which is now being deployed to all accounts. This update includes performance enhancements for large Messengers, and incorporates additional bug fixes and security enhancements. As always, please reach out to DF Studio's support team with any feedback or questions.

Bug Fixes

Messengers

- Addressed an issue which caused excessive delays loading the "Single" asset view when accessing Messengers including large numbers of assets.

Uploads & Assignments

- Fixed a bug which caused improper display of Project names in the Upload Monitor when uploading to Projects with ampersand characters (&) in their names.

File Management & Organization

- Resolved an issue which caused the current view to reload after completing a renaming operation, potentially resetting a user's page or filtering settings. It is now necessary to refresh the view manually in order to see the updated filenames.
- Addressed a bug which could cause inaccurate asset counts when reporting the progress of a renaming operation.
- Corrected a misconfiguration which caused the DFS ID to be absent from the Asset Inspector when viewing the results of a global asset search.
- Fixed an issue which caused unusual characters to appear within certain names in the left-hand navigational sidebar.
- Resolved a bug which could prevent the workspace from loading correctly when displaying assets containing more than one period in the filename (for example, image001..jpg).

Security

- Addressed a misconfiguration that could potentially grant sophisticated attackers unauthorized access to information about an asset.
