Version 2026.2.3

Updated: 11/9/2026

RELEASE NOTES:

Summary

DF Studio is pleased to announce its latest software release, which is now being deployed to all accounts. This update improves the stability of searching for assets and Messengers, and corrects issues related to metadata workflows and API usage. As always, please reach out to DF Studio's support team with any feedback or questions.

Bug Fixes

Messengers

- Fixed an issue which delivered incomplete results when using the "Any" option to search Messengers by Active Status.

Metadata

- Resolved a bug which added a value to a metadata field based on the current type-ahead text, if dismissing the type-ahead menu using the Escape key.
- Mitigated an anomaly which displayed the wrong information after making a selection from certain metadata value drop-down menus.
- Patched a fault which affected the readability of longer values in metadata type-ahead menus.
- Addressed an error which caused custom metadata fields defined with the "number" data type to display incorrectly.

Uploads & Assignments

- Corrected a layout bug which affected the readability of some timestamps displayed in the DF Studio Upload Report.

Account Management

- Rectified a problem which displayed the confirmation pop-up for the deletion of API Credentials without its "confirm" button.

Asset Workflows & Organization

- Fixed a bug which caused unpredictable results when configuring certain queries based around asset filenames in an Advanced Search.
- Addressed an anomaly which duplicated the People Recognition summary in the Asset and Project Inspectors when toggling its disclosure state.

Version 2026.2.3

Updated: 11/9/2026

Publishing

- Resolved an error which prevented loading the Access History under the Publish tab.
- Patched a defect which caused the Collection Inspector to appear empty under the Publish tab.

API & Integration

- Corrected an issue which allowed values to be stored for undefined Library metadata fields via the Enterprise API.
