Version 2026.2.4

Updated: 11/18/2026

RELEASE NOTES:

Summary

DF Studio is pleased to announce its latest software release, which is now being deployed to all accounts. This new version corrects some behaviors in the updated Assignment overlay, fixes an issue with image-based watermarks, and cleans up additional errors and inconsistencies. As always, please reach out to DF Studio's support team with any feedback or questions.

Enhancements

API & Integration

- API credential access will be disabled in situations where multiple authentication attempts have been made with invalid credentials in a short period of time. Account administrators have the ability to re-activate API credentials from within the account settings.

Bug Fixes

Messengers

- Mitigated a defect which could cause the wrong recipient name to be displayed for a Messenger when sent to an email address for which a different name is already stored in the account's contacts list.

Uploads & Assignments

- Rectified a problem which caused some configuration fields to be non-editable when using the "Copy & Reuse" feature when starting a new Assignment based on a previous one.
- Corrected an issue which did not display the full Assignment Key in the right-hand Inspector sidebar when selecting an Assignment.

Asset Workflows & Organization

- Fixed an anomaly which caused the DF Studio logo to be used as the watermark image in some accounts where a custom watermark image had been configured.
- Patched an error which occurred when clicking the download link for a watermarked PDF proofsheet in the Activity Monitor.
- Addressed misconfigurations which caused awkward behavior when working in rich text editor fields, such as email instructions for Assignments, Messengers, etc.
